Claim 1
Cancelled in
Amendment A

A liquid crystal display device comprising a pair of substrates as disposed to spatially oppose each other with a layer of liquid crystal material interposed therebetween and a seal material used for adhesion of one of the substrates to a remaining substrate, said seal material also having a function of encapsulating the liquid crystal material, wherein more than one projection body is photolithographically formed within said seal material so as to provide a predetermined shape thereof, and said projection body is formed on either of said substrates.

IN THE DRAWINGS:

Please enter the attached corrected drawings 13, 18 and 19 with insertion of "SUB2" and "PRO" in Fig. 13 and of "BM" in Figs. 18-19. A Letter to Draftsperson is also submitted herewith.
